

RWorksheet_Leysa#4a

Camilo Leysa

2024-10-14

1.

a. The table below shows the data about shoe size and height. Create a data frame. Describe the data.

```
sizes_shoe<- data.frame(Shoe_size=c(6.5,9.0,8.5,8.5,10.5,7.0,9.5,9.0,13.0,7.5,10.5,8.5,12.0,10.5,13.0,
                                     ,11.5,8.5,5.0,10.0,6.5,7.5,8.5,10.5,8.5,10.5,11.0,9.0,13.0),
                        Height=c(66.0,68.0,64.5,65.0,70.0,64.0,70.0,71.0,72.0,64.0,74.5,67.0,71.0,
                                71.0,77.0,72.0,59.0,62.0,72.0,66.0,64.0,67.0,73.0,69.0,72.0,70.0,
                                69.0,70.0),
                        Gender=c("F","F","F","F","M","F","F","F","M","F","M","F","M","M","M","M","F",
                                "F","M","F","F","M","M","F","M","M","M","M"))
```

sizes_shoe

##	Shoe_size	Height	Gender
## 1	6.5	66.0	F
## 2	9.0	68.0	F
## 3	8.5	64.5	F
## 4	8.5	65.0	F
## 5	10.5	70.0	M
## 6	7.0	64.0	F
## 7	9.5	70.0	F
## 8	9.0	71.0	F
## 9	13.0	72.0	M
## 10	7.5	64.0	F
## 11	10.5	74.5	M
## 12	8.5	67.0	F
## 13	12.0	71.0	M
## 14	10.5	71.0	M
## 15	13.0	77.0	M
## 16	11.5	72.0	M
## 17	8.5	59.0	F
## 18	5.0	62.0	F
## 19	10.0	72.0	M
## 20	6.5	66.0	F
## 21	7.5	64.0	F
## 22	8.5	67.0	M
## 23	10.5	73.0	M
## 24	8.5	69.0	F
## 25	10.5	72.0	M
## 26	11.0	70.0	M
## 27	9.0	69.0	M
## 28	13.0	70.0	M

b. Create a subset by males and females with their corresponding shoe size and height.

```
male_subset <- subset(sizes_shoe, Gender == "M")
male_subset
```

```
##      Shoe_size Height Gender
## 5          10.5   70.0      M
## 9          13.0   72.0      M
## 11         10.5   74.5      M
## 13         12.0   71.0      M
## 14         10.5   71.0      M
## 15         13.0   77.0      M
## 16         11.5   72.0      M
## 19         10.0   72.0      M
## 22          8.5   67.0      M
## 23         10.5   73.0      M
## 25         10.5   72.0      M
## 26         11.0   70.0      M
## 27          9.0   69.0      M
## 28         13.0   70.0      M
```

b.

```
female_subset <- subset(sizes_shoe, Gender == "F")
female_subset
```

```
##      Shoe_size Height Gender
## 1           6.5   66.0      F
## 2           9.0   68.0      F
## 3           8.5   64.5      F
## 4           8.5   65.0      F
## 6           7.0   64.0      F
## 7           9.5   70.0      F
## 8           9.0   71.0      F
## 10          7.5   64.0      F
## 12          8.5   67.0      F
## 17          8.5   59.0      F
## 18          5.0   62.0      F
## 20          6.5   66.0      F
## 21          7.5   64.0      F
## 24          8.5   69.0      F
```

c. Find the mean of the shoe size of the respondents.

```
mean_shoesize <- mean(sizes_shoe$Shoe_size)
mean_shoesize
```

```
## [1] 9.410714
```

c. Find the mean of the height of the respondents.

```
mean_height <- mean(sizes_shoe$Height)
mean_height
```

```
## [1] 68.57143
```

d. Is there a relationship between shoe size and height? Why?

#There is a relationship in the shoe size and height. As we can see in the table, if a person is #tend to be taller, its shoe size is also big. For instance, we can see in the person with the #height of 77.0 has also a big shoe size of 13.0. This implies that the taller individuals often #have larger feet which generally aligns with their biological expectations.

2. a. Construct character vector months to a factor with factor() and assign the result to factor_months_vector. Print out factor_months_vector and assert that R prints out the factor levels below the actual values.

```
months_vector <- c("March", "April", "January", "November", "January", "September", "October",
                  "September", "November", "August", "January", "November", "November", "February",
                  "May", "August", "July", "December", "August", "August", "September", "September",
                  "November", "February", "April")
factor_months_vector <- factor(months_vector)
factor_months_vector
```

```
## [1] March      April      January   November  January   September October
## [8] September November  August    January   November  November  February
## [15] May        August    July      December  August    August    September
## [22] September November  February  April
## 11 Levels: April August December February January July March May ... September
```

3. Then check the summary() of the months_vector and factor_months_vector. Interpret the results of both vectors. Are they both equally useful in this case?

```
summary_months <- summary(months_vector)
summary_months
```

```
##      Length      Class      Mode
##      25 character character
```

```
summary_factor_months <- summary(factor_months_vector)
summary_factor_months
```

```
##      April      August  December  February  January      July      March      May
##         2         4         1         2         3         1         1         1
## November  October  September
##         5         1         4
```

4. Create a vector and factor for the table below.

```
Directions <- c("East","West","North")
Frequency<- c(1L,4L,3L)
Directions
```

```
## [1] "East" "West" "North"
```

```
Frequency
```

```
## [1] 1 4 3
```

```
new_order_data <- factor(Directions, levels= c("East","West","North"))
new_order_data
```

```
## [1] East West North
## Levels: East West North
```

5. Enter the data below in Excel with file name = import_march.csv

```
Data <- read.table("import_march.csv", sep="," , header = TRUE)
Data
```

```
## Students Strategy.1 Strategy.2 Strategy.3
## 1 NA NA NA
## 2 Male 8 10 8
## 3 4 8 6
## 4 0 6 4
## 5 Female 14 4 15
## 6 10 2 12
## 7 6 0 9
```

b.View the dataset. Write the R scripts and its result.

```
View(Data)
```

6. Full Search

```
set.seed(123)
chosen <- as.integer(readline(prompt = "Choose any number: "))
```

```
## Choose any number:
```

```
print(paste("Your chosen number is: ",chosen))
```

```
## [1] "Your chosen number is: NA"
```

```

if (is.na(chosen)) {
  print("Invalid input. Please enter a valid integer.")
} else if(chosen <= 1 || chosen >= 50) {
  print("The number selected is beyond the range of 1 to 50")
} else if (chosen == 20) {
  print("TRUE")
} else {
  print(paste("The chosen number is: ", chosen))
}

```

```
## [1] "Invalid input. Please enter a valid integer."
```

7. Function that prints the minimum number of bills that must be paid

```

min_bills <- function(price) {
  bills <- c(1000,500,200,100,50)
  count <- 0

  for (bill in bills){
    count <- count + (price %/% bill)
    price <- price %% bill
  }

  return(count)
}

snack_price <- as.numeric(readline(prompt = "Amount of Snack: "))

```

```
## Amount of Snack:
```

```
print(paste("Minimum number of bills needed: ",min_bills(snack_price)))
```

```
## [1] "Minimum number of bills needed:  NA"
```

8a. Math Scores

```
students <- data.frame(Name= c("Annie", "Thea", "Steve", "Hanna"), Grade1= c(85,65,75,95), Grade2 = c(65,75,85,95), Grade3 = c(85,90,80,100), Grade4 = c(100,90,85,90))
```

```
##      Name Grade1 Grade2 Grade3 Grade4
## 1 Annie      85      65      85     100
## 2 Thea       65      75      90      90
## 3 Steve      75      55      80      85
## 4 Hanna      95      75     100      90
```

8b. rowMean Function

```

for (i in 1:nrow(students)) {
  averagE <- mean(as.numeric(students[i,2:5]))
  print(paste(students$Name[i], "s average grade is",
    round(averagE,2)))
}

```

```
## [1] "Annie 's average grade is 83.75"
## [1] "Thea 's average grade is 80"
## [1] "Steve 's average grade is 73.75"
## [1] "Hanna 's average grade is 90"
```

8c. Identify tests with an average score below 80

```
for (i in 2:5) {
  test_ave <- mean(students[,i])
  if (test_ave < 80) {
    print(paste("The", colnames(students)[i], "test was difficult."))
  }
}
```

```
## [1] "The Grade2 test was difficult."
```

8d. Highest score in a semester.

```
for (i in 1:nrow(students)) {
  high_score <- FALSE
  for (j in 2:5) {
    if (students[i,j] > 90) {
      high_score <- TRUE
      break
    }
  }
  if (high_score) {
    print(paste(students$Name[i], "'s highest grade this semester is", max(as.numeric(students[i,2:5]))))
  }
}
```

```
## [1] "Annie 's highest grade this semester is 100"
## [1] "Hanna 's highest grade this semester is 100"
```
